Il Gruppo Foster
Foster Group

4 aziende complementari
4 Complementary Companies

Foster Group, azienda italiana fondata nel 1973, è oggi attiva in tutto il mondo. La nostra struttura comprende quattro società che operano con sistemi, processi e produzioni complementari nel settore dell'arredamento. Bautek è l'azienda del gruppo specializzata nella progettazione su misura di Top Cucina con piano cottura, lavello e cappa integrati e Complementi d'arredo in acciaio Inox.

Foster Group, an Italian company founded in 1973, is now active worldwide. Our structure includes four companies that operate with complementary systems, processes, and productions in the furniture sector.
Bautek is the group's company specializing in the custom design of kitchen worktops with integrated cooktops, sinks, and range hoods, as well as stainless steel furnishings.

Bautek | Artigiani dell'acciaio
Steel artisans

La missione di Bautek è creare prodotti "speciali", in cui l'acciaio viene modellato per realizzare piani di lavoro unici ed esclusivi per cucine e ambienti domestici e industriali.

Bautek's mission is to create "special" products, where steel is crafted into unique and exclusive worktops for kitchens, as well as domestic and industrial environments.

Bautek | Ogni top un pezzo unico
Each worktop a unique piece

Utilizziamo tecnologie all'avanguardia e personale altamente specializzato per realizzare prodotti in acciaio inox su misura, secondo le specifiche richieste dei clienti. Ogni "speciale" è un pezzo unico, ideale per chi desidera una cucina da vivere, sempre elegante e alla moda.

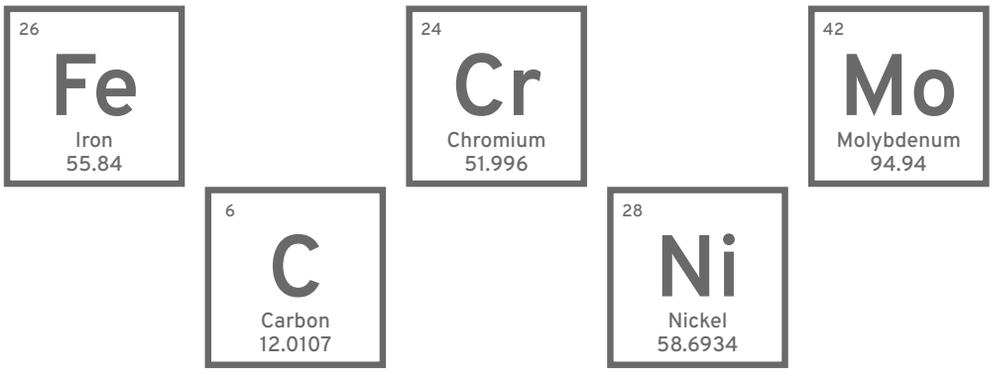

We use cutting-edge technology and highly specialized personnel to create custom stainless steel products according to customer specifications. Each 'special' piece is unique, ideal for those who desire a kitchen that is both functional and always stylish and fashionable.

L'acciaio di Foster una storia di eccellenza
Foster and steel *a story of excellence*

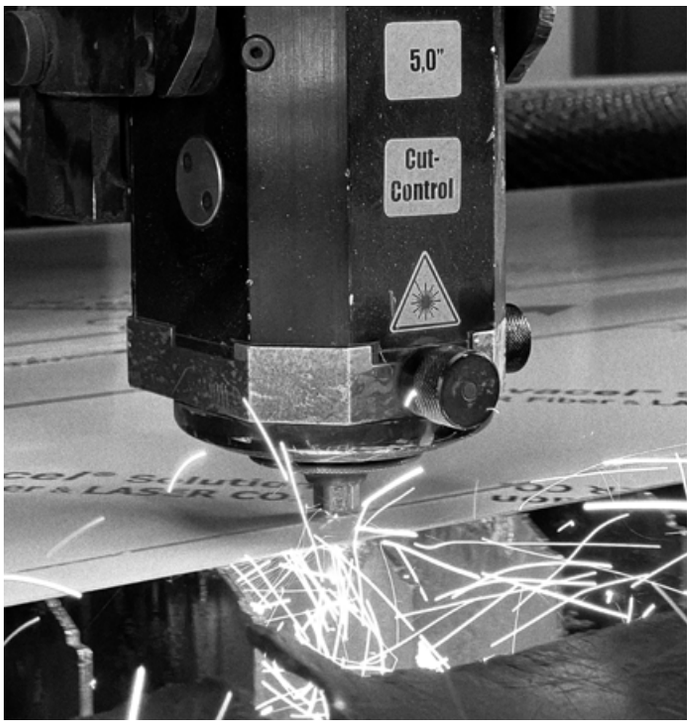

L'acciaio è un materiale nobile e senza tempo, completamente riciclabile e sinonimo di igiene. I prodotti speciali di Bautek sono realizzati solo con i migliori acciai inossidabili. L' AISI 304 (EN 1.4301) è un acciaio inox austenico che contiene dal 18% al 20% di cromo e dall'8% al 10% di nichel, conferendo al materiale una resistenza alla corrosione senza pari. L' AISI 316 (1.4401) è una lega arricchita di molibdeno, che aumenta ulteriormente la resistenza alla corrosione, rendendola particolarmente adatta per l'outdoor anche in ambienti ad alta salinità.

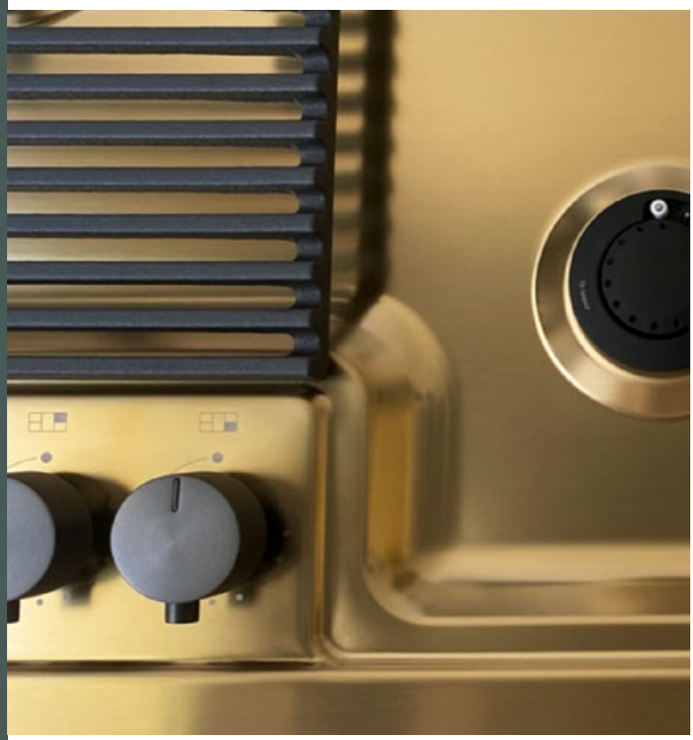

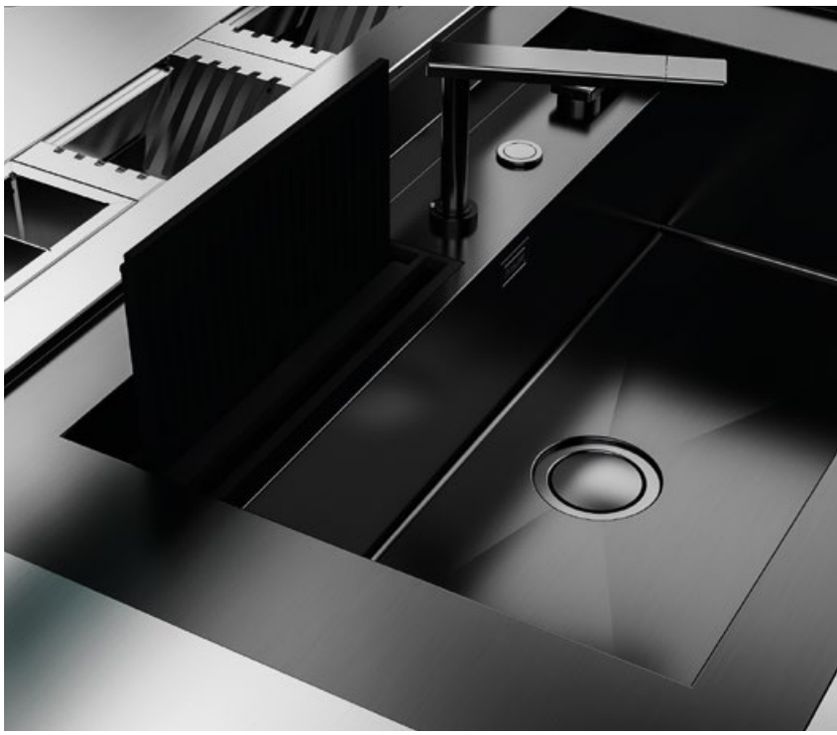

Steel is a noble, timeless material, fully recyclable and synonymous with hygiene. Bautek's special products are made exclusively from the finest stainless steels. AISI 304 (EN 1.4301) is an austenitic stainless steel containing 18%–20% chromium and 8%–10% nickel, giving the material outstanding corrosion resistance. AISI 316 (EN 1.4401) is an alloy enriched with molybdenum, which further increases corrosion resistance, making it particularly suitable for outdoor use, even in high-salinity environments.

PVD Innovazione e design
Innovation and Design

Il processo Foster PVD (Physical Vapor Deposition) è una nanotecnologia che consente di colorare l'acciaio inox attraverso un processo fisico, fondendo metalli preziosi con l'acciaio per ottenere colorazioni uniche e resistenti. Il PVD Foster non è una verniciatura né comporta l'uso di sostanze chimiche; viene realizzato seguendo una procedura sviluppata dal nostro reparto R&D a partire dal 2010.
Il nostro metodo di realizzazione delle finiture PVD si distingue per le elevate caratteristiche tecniche di durezza superficiale e resistenza a graffi, abrasione, calore e agenti atmosferici, differenziandosi dai PVD estetici comuni presenti sul mercato.

The Foster PVD (Physical Vapor Deposition) process is a nanotechnology that enables coloring of stainless steel through a physical process, fusing precious metals with steel to achieve unique and durable colorations. Foster PVD is not a paint coating and does not involve the use of chemicals; it is carried out using a procedure developed by our R&D department since 2010.
Our method for creating PVD finishes stands out for its high technical properties of surface hardness and resistance to scratches, abrasion, heat, and atmospheric agents, distinguishing it from common aesthetic PVD finishes available on the market.

Bautek
Foster Group

Finiture / *Finishes*

Le finiture dell'acciaio sono un elemento distintivo dei piani Bautek. Non rappresentano solo una scelta estetica, ma il risultato di uno studio che unisce design, funzionalità e durabilità. Le quattro finiture disponibili sono progettate per valorizzare l'eleganza naturale dell'acciaio inox e rispondere alle esigenze dell'uso quotidiano. Superfici pensate per garantire praticità, facilità di pulizia e manutenzione nel tempo, mantenendo inalterate prestazioni ed estetica.

Steel finishes are a distinctive element of Bautek worktops. They are not just an aesthetic choice, but the result of careful research that combines design, functionality, and long-term durability. The four available finishes are designed to enhance the natural elegance of stainless steel while meeting the demands of everyday use. Surfaces conceived to ensure practicality, ease of cleaning, and long-term maintenance, preserving both performance and appearance over time.

Supporti strutturali per piani

Worktops structure reinforcements

I supporti strutturali per i piani in acciaio inox sono realizzati in diversi materiali.

The structural supports for stainless steel worktops are made from different materials

ALU + TRV

Alluminio alveolare + Traversi
Aluminium honeycomb panel + Crossbars

ALU + TRV: costituito da pannelli in alluminio alveolare (peso ridotto e perfetta planarità) e traversi garantendo un perfetto appoggio sulle basi.

ALU + TRV: made of honeycomb aluminum panels (lightweight and with perfect surface flatness) and crossbars that ensure perfect support on the base units.

ALU

Alluminio alveolare
Aluminium honeycomb panel

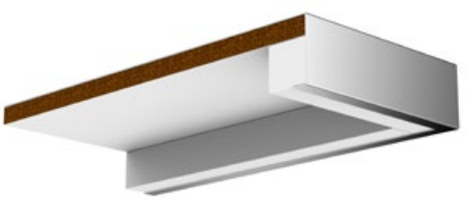

ALU: costituito da pannelli in alluminio alveolare conferendo peso ridotto e una perfetta planarità superficiale. Lo spessore minimo dei piani è di 6mm.

ALU: made of honeycomb aluminum panels that provide reduced weight and perfect surface flatness. The minimum thickness of the tops is 6 mm.

V100 + TRV

Nobilitato V100 Classe E1 + Traversi
Melamine V100 E1 Class panel + Crossbars

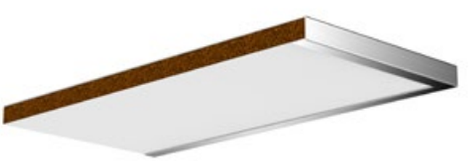

V100 + TRV: costituito da pannelli in nobilitato idrofugo Classe E1 e traversi garantendo un perfetto appoggio sulle basi.

V100 + TRV: made of melamine chipboard waterproof E1 Class panel and crossbars that ensure perfect support on the base units.

V100

Nobilitato V100 Classe E1
Melamine V100 E1 Class panel

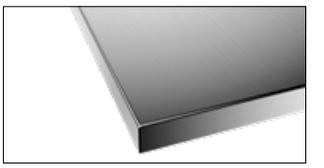

Nobilitato V100: realizzato con pannelli in nobilitato idrofugo Classe E1.

Melamine panel V100: made of melamine chipboard waterproof E1 Class panels.

I top prevedono spessori (traversi) fino al bordo. *Worktops have thicknesses up to the edge*

Funzionalità Piani induzione / *Induction hobs functionabilities*

Bridge

La funzione bridge permette di associare due zone formando un'unica estesa zona di cottura.

Power Control

Massima libertà di utilizzo. L'utente può facilmente modificare il massimo assorbimento del piano secondo le proprie esigenze ed eventualmente riprogrammare per modificare o togliere i limiti di potenza in qualsiasi momento.

T-chef

Permette di impostare particolari temperature (42°C, 70°C, 94°C) e mantenerle costanti durante la cottura

Powerboost

La funzione Booster [P] garantisce per alcuni minuti un aumento di potenza alla piastra selezionata.

Slider Control

È sufficiente sfiorare il display Touch per impostare il livello di potenza desiderata.

Safety

Tutti i piani sono dotati delle più moderne e sofisticate protezioni: Spegnimento centralizzato; Blocco per la sicurezza; Indicatori di calore residuo; Safety System che spegne il piano in mancanza di pentole; Overflow detector, che spegne la piastra in caso di tracimazione di liquidi; Disattivazione automatica, per scongiurare incidenti causati da dimenticanze.

Pot Speed Test

Testa le vostre pentole, restituendo una classificazione da 0 a 3 in funzione dell'efficienza e velocità di riscaldamento.

Pause

Permette di interrompere e ripristinare le modalità impostate in modo istantaneo.

Heat Retention

Permette di mantenere in temperatura (70° C) le vostre pietanze.

Chef Cook

Una funzione da vero chef, il piano imposta automaticamente dei livelli di potenza a scalare nelle varie zone cottura, che si attivano automaticamente a contatto con la pentola. In questo modo è possibile cucinare a differenti livelli di potenza senza regolarli di volta in volta, semplicemente spostando la pentola sul piano.

Intelligent Pot Localization

Riconosce su quale zona viene appoggiata la pentola e attiva automaticamente i relativi comandi per la regolazione della potenza.

Double powerboost

Due ulteriori regolazioni di potenza che raggiungono i 3700 W, utilizzabili su una singola zona o distribuiti sull'intera zona estesa del Bridge (dove presente).

Cooking Completion Timer

Ogni piastra è dotata di programmazione indipendente che permette di impostare differenti tempi di cottura.

Timer

Ulteriore timer contaminuti svincolato dalla programmazione di fine cottura.

Pot Detector

Riconosce e calcola la superficie d'appoggio della pentola. Rimuovendo la pentola, le piastre si disattivano automaticamente.

Auto Go&Stop

Attiva le piastre inizialmente alla massima potenza, fino al raggiungimento del livello impostato.

Automatic Bridge

Quando una pentola invade 2 differenti zone, attiva automaticamente la funzione Bridge.

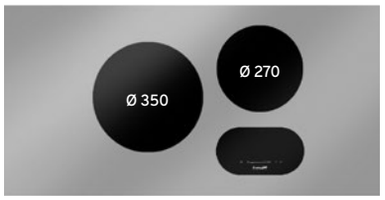

Recall

La funzione permette di richiamare in modo immediato le ultime impostazioni selezionate nella precedente cottura.

Smart Fan System

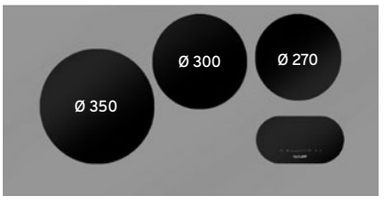

La corretta ventilazione è essenziale per il funzionamento ottimale dei piani ad induzione. Il sistema Foster regola automaticamente il grado di ventilazione in funzione delle temperature raggiunte.

Il **canale attrezzato Slim** è una soluzione intelligente pensata per l'ottimizzazione dello spazio in cucina.
Nei piani con profondità minima di 60 cm consente l'integrazione dei canali dietro la vasca o il piano cottura, sfruttando aree solitamente inutilizzate. In questo modo anche le superfici più compatte diventano altamente funzionali, senza rinunciare a ordine e praticità.
Una scelta tecnica che migliora l'ergonomia e valorizza ogni centimetro del piano di lavoro.

The Slim equipped channel is an intelligent solution designed to optimize kitchen space.
On countertops with a minimum depth of 60 cm, it allows the integration of channels behind the sink or the cooktop, making use of areas that are usually unused. In this way, even the most compact surfaces become highly functional, without sacrificing order and practicality.
A technical choice that improves ergonomics and enhances every centimetre of the worktop.

Canale speciale **block** / ***Block*** *special channel*

Il **Canale Speciale Block** nasce dall'integrazione dei canali standard Foster in un unico corpo in acciaio inox, saldato a un blocco strutturale progettato su misura.

Questo sistema isola la zona attrezzata in un elemento unico e autonomo, garantendo continuità estetica, massima igiene e robustezza costruttiva.

Il blocco può essere semplicemente accostato al piano cucina, offrendo massima libertà compositiva.

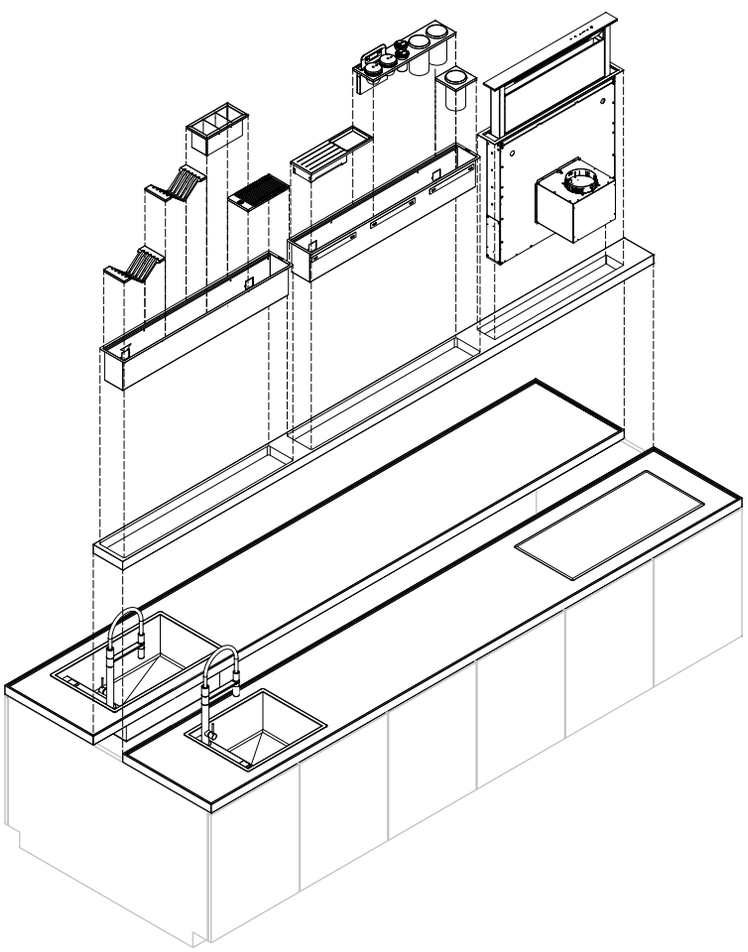

L'assemblaggio modulare consente la personalizzazione degli accessori e delle configurazioni in base alle esigenze del progetto. Una soluzione tecnica che diventa un segno distintivo di design evoluto e funzionalità professionale.

*The **Special Block Channel** is created by integrating Foster's standard channels into a single stainless-steel body, welded to a custom-designed structural block.*

This system isolates the equipped area into a unique, self-contained element, ensuring aesthetic continuity, maximum hygiene, and exceptional structural strength.

The block can be simply placed alongside the kitchen countertop, offering maximum freedom in composition.

Its modular assembly allows for customization of accessories and configurations according to the project's needs. A technical solution that becomes a distinctive mark of advanced design and professional functionality.

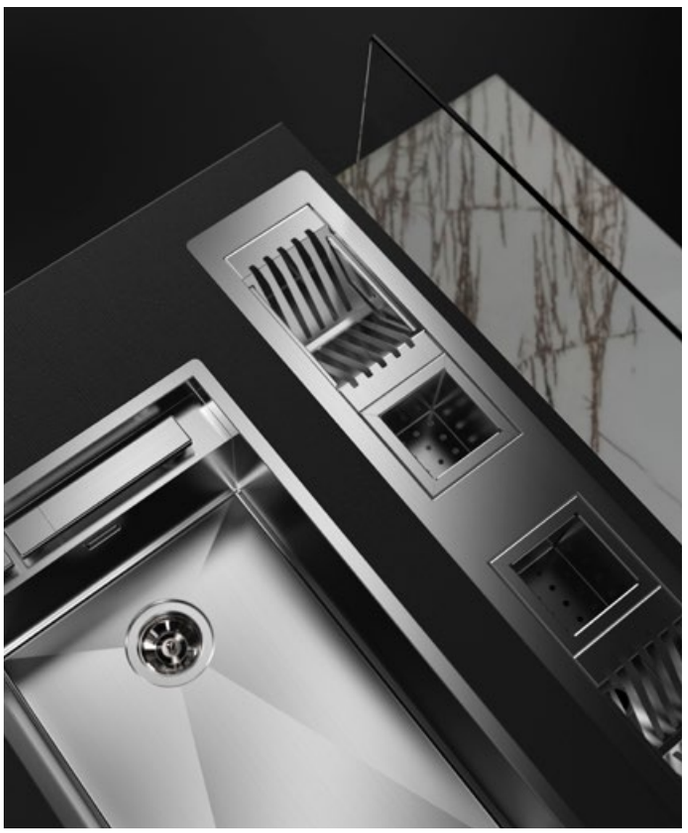

Canale speciale **filotop** / ***Filotop*** *special channel*

Questo canale attrezzato è progettato per integrarsi in modo funzionale ed elegante all'interno del piano cucina, trasformando il top in una postazione operativa organizzata. Disponibile per installazione filotop o sopratop, può essere inserito in piani realizzati in qualsiasi materiale, garantendo massima libertà progettuale.

Realizzato in acciaio inox, accoglie accessori modulari dedicati a preparazione, lavaggio e organizzazione degli utensili.

Il sistema consente di concentrare le funzioni in un'unica superficie, migliorando ergonomia e fluidità d'uso.

Una soluzione tecnica che unisce flessibilità e ordine, valorizzando il piano cucina come elemento centrale del progetto.

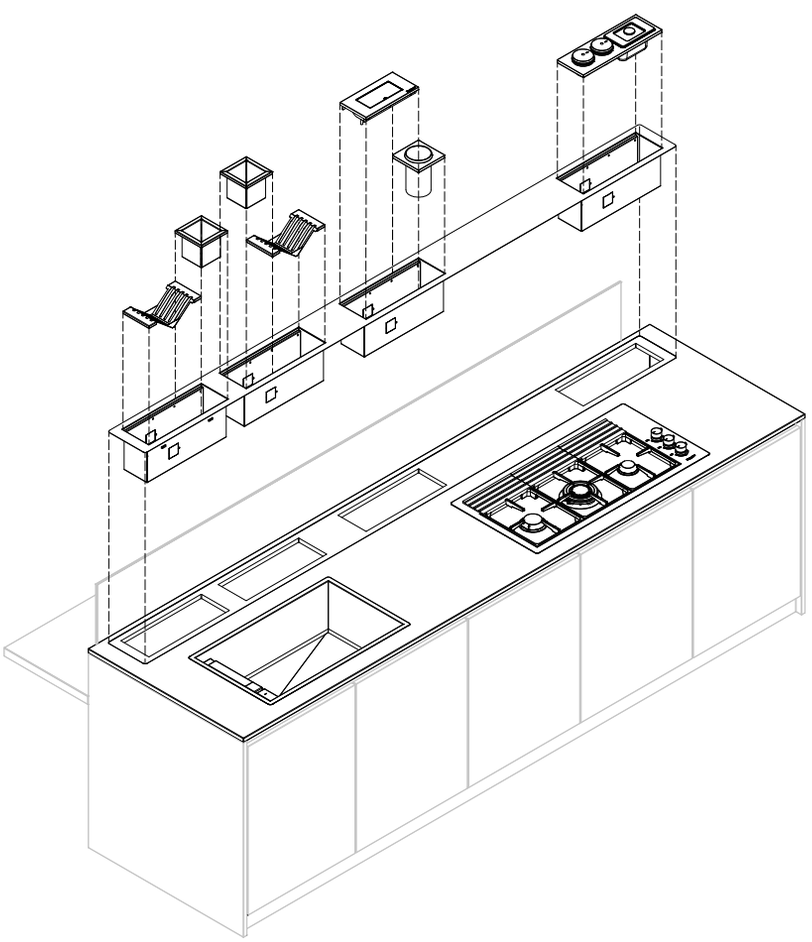

The equipped channel is designed to integrate seamlessly into the kitchen worktop, transforming it into an organized and efficient workspace.

Available for flush-mounted (filotop) or top-mounted installation, it can be integrated into worktops made of any material, ensuring maximum design freedom.

Made of stainless steel, it accommodates modular accessories for food preparation, washing, and utensil organization. The system concentrates functions into a single surface, improving ergonomics and ease of use.

A technical solution that combines flexibility and order, enhancing the worktop as the central element of the kitchen design.

360 kitchen

360 Kitchen è il sistema cucina freestanding in acciaio inox saldato firmato Bautek. Strutture indipendenti, mobili e autonome, progettate per vivere al centro dell'ambiente senza vincoli architettonici.
Piano, cottura e lavello si integrano in un'unica superficie continua, garantendo igiene, solidità e durata nel tempo. Pensata per contesti indoor e outdoor, 360 Kitchen unisce prestazioni professionali e libertà compositiva.
La collezione si articola in quattro modelli — Finalmente, Insieme, Qui, Ognidove — interpretazioni diverse di una stessa filosofia: rendere la cucina protagonista, ovunque.

360 Kitchen is Bautek's freestanding welded stainless steel kitchen system. Independent, mobile structures designed to stand at the center of a space, free from architectural constraints. Cooktop, sink, and worktop are seamlessly integrated into a single continuous surface, ensuring hygiene, strength, and long-term durability. Suitable for both indoor and outdoor environments, 360 Kitchen combines professional performance with design freedom.
The collection includes four models — Finalmente, Insieme, Qui, Ognidove — different expressions of the same philosophy: making the kitchen the true focal point, anywhere.

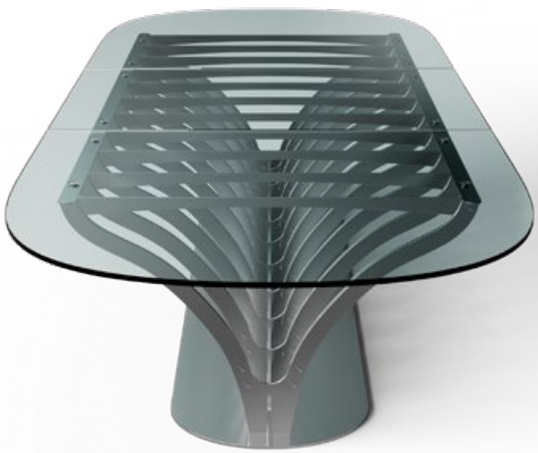

Tavolo Opera viva

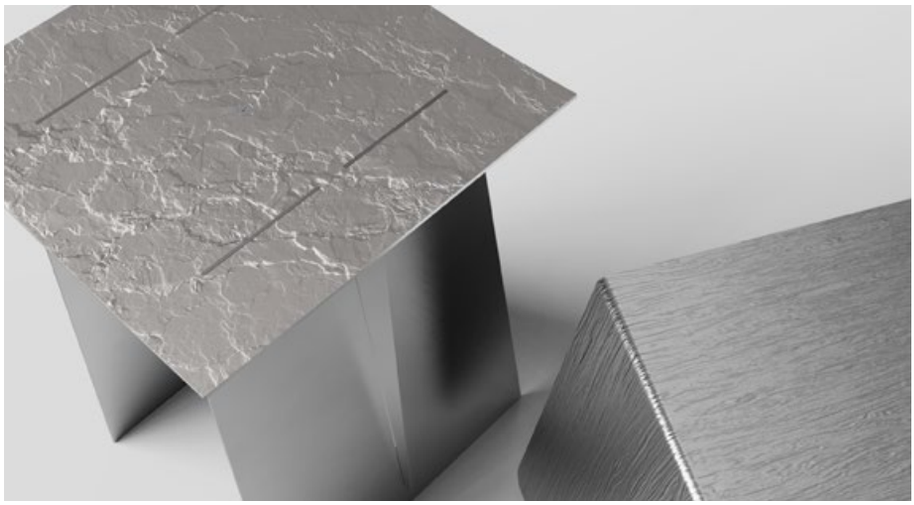

"Opera Viva" è una scultura funzionale interamente realizzata in acciaio inox 316, materiale scelto per la sua straordinaria resistenza alla corrosione, ideale anche per contesti marini.
Ispirata allo scafo di una nave, la struttura esprime forza, purezza e tensione dinamica. Il piano sagomato in vetro, sospeso con eleganza sull'acciaio, introduce leggerezza e trasparenza, creando un equilibrio raffinato tra solidità e luce.

Non è solo un tavolo, ma una presenza architettonica: un'opera che vive nello spazio, progettata per durare e resistere anche nelle condizioni più estreme.
"Opera Viva" is a functional sculpture entirely crafted in AISI 316 stainless steel, selected for its exceptional resistance to corrosion, making it ideal for marine environments.
Inspired by the hull of a ship, the structure expresses strength, purity, and dynamic tension. The shaped glass top, elegantly suspended above the steel frame, introduces lightness and transparency, creating a refined balance between solidity and light.
More than a table, it is an architectural presence — a living work designed to endure and perform even in the most demanding conditions.

Sgabelli

Sgabelli monolitici realizzati in lamiera di acciaio inox da 4 mm, progettati per garantire solidità strutturale e pulizia formale.
La superficie texturizzata effetto roccia o effetto legno valorizza la materia, unendo resistenza, profondità tattile e carattere contemporaneo.

Monolithic stools crafted from 4 mm stainless steel sheet, designed to ensure structural strength and formal purity.
The textured surface rock effect or wood effect enhances the materiality, combining durability, tactile depth, and contemporary character.

Tavolo di lavoro

Un tavolo/cucina freestanding che richiama i banchi da lavoro dei vecchi fabbri: essenziale, solido, autentico. Un omaggio al lavoro e all'artigianalità, reinterpretato in chiave contemporanea.
Il top, volutamente ridotto nelle dimensioni, ottimizza lo spazio integrando vasca di lavaggio, piano cottura e vano portaposate nascosto da un tagliere a scorrimento, per una funzionalità compatta e intelligente.
La combinazione di acciaio inox e legno massello esprime equilibrio materico e richiama la tradizione dei grandi tavoli da lavoro, unendo resistenza e calore naturale.

A freestanding table/kitchen inspired by traditional blacksmith workbenches: essential, solid, and authentic. A tribute to craftsmanship and the culture of making, reinterpreted in a contemporary key.
The intentionally compact worktop optimizes space by integrating sink, cooktop, and a concealed cutlery compartment hidden beneath a sliding cutting board, ensuring smart and efficient functionality.
The combination of stainless steel and solid wood creates a refined material contrast, echoing traditional worktables while balancing strength and natural warmth.

Ponte attrezzato

Il ponte attrezzato è un centro funzionale e contenitivo che si sviluppa in verticale, progettato per organizzare accessoristica e utensili con ordine ed efficienza. Ottimizza lo spazio nelle isole e nei piani a muro, liberando la superficie di lavoro e trasformando la cucina in un sistema operativo compatto ed essenziale. La scelta dell'accostamento tra Corian colorato e acciaio inox da 4 mm finitura "rock" valorizza l'estetica del progetto e amplia le possibilità compositive, permettendo dialoghi materici e cromatici con diverse configurazioni cucina.

The equipped bridge is a vertical functional and storage hub designed to organize accessories and tools with efficiency and clarity. It optimizes space in island and wall-mounted layouts, freeing the work surface and transforming the kitchen into a compact and essential operational system.The combination of colored Corian and 4 mm "rock" finish stainless steel enhances the aesthetic value of the project and expands compositional possibilities, enabling refined material and color pairings across different kitchen configurations.

Scaffalatura inox+corian

Un sistema di scaffalatura modulare che unisce struttura in acciaio inox e ripiani in Corian, creando un equilibrio tra rigore tecnico e colore.
La solidità dell'inox dialoga con la superficie materica e personalizzabile del Corian, offrendo massima libertà compositiva e integrazione armonica negli ambienti cucina e living.
Un elemento architettonico leggero ma strutturale, pensato per organizzare, esporre e valorizzare lo spazio.

A modular shelving system combining a stainless steel structure with Corian shelves, creating a balance between technical precision and color expression.
The strength of stainless steel interacts with the customizable, material surface of Corian, offering maximum compositional freedom and seamless integration into kitchen and living environments.
A lightweight yet structural architectural element designed to organize, display, and enhance the space.

Strutture plug&cook

Plug & Cook: la parola dice già tutto. Strutture in acciaio inox AISI 304 o 316, progettate per essere operative da subito.
Completamente configurabili e personalizzabili, si adattano a ogni esigenza progettuale indoor o outdoor offrendo modularità, prestazioni professionali e massima libertà compositiva.

Plug & Cook – the name says it all. Stainless steel structures in AISI 304 or 316, designed to be ready for use from the very first moment.
Fully configurable and customizable, they adapt to any design requirement, indoor or outdoor, delivering modularity, professional performance, and complete compositional freedom.

Galantone block

Centro di lavaggio freestanding, evoluzione della vasca Galante, progettato come elemento monolitico indipendente. Realizzato in acciaio inox con rivestimento in lamiera da 4 mm finitura “rock” o effetto legno, unisce forza materica e identità estetica, trasformando la funzione in presenza scenica. Un blocco compatto che diventa protagonista dello spazio, con prestazioni professionali e carattere scultoreo.

A freestanding washing center, evolving from the Galante sink concept and designed as an independent monolithic element. Crafted in stainless steel and clad in 4 mm sheet metal with “rock” or wood-effect finish, it combines material strength with architectural identity, transforming function into a striking presence. A compact block that becomes the focal point of the space, delivering professional performance with sculptural character.

Galante Block

Evoluzione della vasca Galante, Galante Block 0.2 è progettato per integrarsi nella cucina come un lavello da incasso, mantenendo un'identità forte e riconoscibile.
Il design monolitico e l'utilizzo della lamiera texturizzata da 4 mm ne valorizzano la presenza materica, trasformando un elemento funzionale in un segno architettonico distintivo.
Una soluzione compatta che unisce rigore formale, prestazioni professionali e continuità progettuale con l'ambiente cucina.

An evolution of the Galante sink, Galante Block 0.2 is designed to integrate into the kitchen as a built-in sink while maintaining a strong and distinctive identity.
Its monolithic design and the use of 4 mm textured sheet metal enhance its material presence, transforming a functional element into a defined architectural feature.
A compact solution that combines formal precision, professional performance, and seamless integration within the kitchen environment.

Lavelli e cotture block (stonehenge)

Moduli monolitici a incasso che trasformano lavelli e cotture in volumi architettonici distintivi, integrati con forza nel progetto cucina.
La lavorazione “Block” viene realizzata sui prodotti standard Foster, reinterpre-tandoli come elementi scultorei e perfettamente integrati. Le finiture PVD Foster completano il progetto, ampliando le possibilità cromatiche e garantendo continuità estetica e materica.

Monolithic built-in modules that transform sinks and cooktops into distinctive architectural volumes, strongly integrated within the kitchen design.
The “Block” processing is applied to standard Foster products, reinterpreting them as sculptural and fully integrated elements. Foster PVD finishes complete the concept, expanding color possibilities while ensuring aesthetic and material continuity.

Complementi
Complements

Un'ampia gamma di complementi realizzati per potersi adattare a tutte le esigenze, rendendo i piani delle vere e proprie postazioni di lavoro dove cucinare diventa un vero e proprio piacere. Foster utilizza materiali all'avanguardia conferendo a questi prodotti un'alta durabilità ed una garanzia di sicurezza.

A wide range of complements designed to adapt to every need, turning worktops into true workstations where cooking becomes a genuine pleasure. Foster uses cutting-edge materials, giving these products exceptional durability and a guaranteed level of safety.

Prodotti pulizia acciaio / *Steel cleaning products*

I prodotti in acciaio inossidabile non hanno bisogno di manutenzione particolare; tuttavia è opportuno adottare alcuni accorgimenti e utilizzare detergenti adeguati per la pulizia quotidiana.
In generale sono sufficienti un lavaggio con acqua calda e sapone o acqua calda e aceto di alcool, un abbondante risciacquo e un'asciugatura conun panno. Sono da evitare: l'acido cloridrico, polveri abrasive, pagliette, spazzole e sostanze per pulire l'argento.
Per orientarvi nella scelta dei detergenti, Foster propone i prodotti della linea "Steel Clean" per la pulizia dell'acciaio:

- **Panno in microfibra**, per eliminare velocemente tracce di unto, grasso e polvere.
- **Crema professionale** per restituire l'originale splendore all'acciaio, rimuove incrostazioni di calcare, sporco ostinato ed eventuali macchie di ruggine causate dal contatto prolungato di oggetti ferrosi.

Stainless steel products do not require any special maintenance; however, it is advisable to adopt certain precautions and use appropriate detergents for daily cleaning.
***In general, washing with warm water and soap or with warm water and alcohol vinegar is sufficient**, followed by thorough rinsing and drying with a cloth. The following should be avoided: hydrochloric acid, abrasive powders, scouring pads, brushes, and products intended for cleaning silver.*
To help you choose the right detergents, Foster offers products from the "Steel Clean" line for stainless steel cleaning:

- ***Microfiber cloth**, for quickly removing traces of oil, grease, and dust.*
- ***Professional cream** to restore the original shine of the steel, removing limescale deposits, stubborn dirt, and any rust stains caused by prolonged contact with ferrous objects.*
